HxGN OnCall® Dispatch

Breaking Changes Notes

Release date: August 2024
Release version: 10.00.2309.4
Release type: On-premises and Cloud
Released by: Hexagon Global Product Center
Release method: Hexagon Global Software Delivery Process

Copyright

Warning: This software product, including the computer program, icons, graphical symbols, file formats, audio-visual displays and documentation may be used only as permitted under the applicable software license agreement and contains confidential and proprietary information of Intergraph Corporation ("Hexagon") and/or third parties that is protected by patent, trademark, copyright and/or trade secret law, and therefore, may not be transferred, assigned, provided or otherwise made available to any third party without proper authorization from Hexagon.

Restricted Rights Legend

Use, duplication, or disclosure by the Government is subject to restrictions as set forth in subparagraph (c) (1) (ii) of the Rights in Technical Data and Computer Software clause at DFARS 252.227-7013 or subparagraphs (c) (1) and (2) of Commercial Computer Software -- Restricted Rights at 48 CFR 52.227-19, as applicable.

Unpublished - rights reserved under the copyright laws of the United States.

Terms of Use

Use of this software product is subject to the End User License Agreement ("EULA") delivered with this software product, unless the licensee has accepted a valid license agreement for this software product that Hexagon has identified to licensee as taking precedence over the EULA, in which case the accepted license agreement will govern the use of this software product. Subject to the terms contained within the applicable license agreement, Hexagon gives licensee permission to print a reasonable number of copies of the documentation, as defined in the applicable license agreement and delivered with the software product, for licensee's internal, non-commercial use. The documentation may not be resold or redistributed and may not be copied or printed for those purposes.

Disclaimers

Hexagon and its suppliers believe the information in this publication is accurate as of its publication date. Hexagon is not responsible for any error that may appear in this document. The information and the software discussed in this document are subject to change without notice.

Language translation disclaimer: Any translation of this document is not an official version and has been provided for convenience only. Some portions of the translation may be obtained using machine translation. It has been provided on a pure "As Is" basis. The official version of this documentation is its English version. Any discrepancies or differences created in this translation are not binding and have no legal effect for compliance or enforcement purposes. Hexagon disclaims any and all warranties, whether express or implied, as to the accuracy of this translation.

Reasonable efforts have been made to provide an accurate translation, however, no translation, whether automated or provided by human translators is perfect. If any questions arise related to the accuracy of the information contained in the translated version of this article, please refer to its official English version. Additionally, some text, graphics, PDF documents and other accompanying material may not have been translated.

Trademarks

Hexagon, HxGN, Intergraph, the Hexagon logo, and HxGN OnCall are registered trademarks of Hexagon AB or its subsidiaries in the United States and in other countries. Other brands and product names are trademarks of their respective owners.

Template File Changes for Location Data

In 2309, location information was moved from the CommonEvent and CommonEventCall tables to the CommonEventLocation table. The following tables and the foreign keys now point to a row in CommonEventLocation table:

- CommonEvent.EventLocationId
- CommonEventCall.CallerHomeLocationId
- CommonEventCall.CallerLocationId

The template files for the following products have been updated in this release to accommodate this change:

- HxGN OnCall Dispatch | CAD Link Interfaces
- HxGN OnCall Dispatch | Firelink Interfaces
- RMS Link

The template files have been updated with a dictionary of locations that can be referenced using the foreign key names of the associated table. For example, to get location details for CommonEvent, the following name and key would be used: CommonEventLocationData[CommonEvent.EventLocationId]. With the field name included, State for example, the full value would be CommonEventLocationData[CommonEvent.EventLocationId].State.

Because the data from the CommonEventLocation table is expected to be used extensively, the key "CommonEventLocationId" can be used instead of "CommonEvent.EventLocationId," such that CommonEventLocationData[CommonEvent.EventLocationId].State can be replaced with CommonEventLocationData[CommonEventLocationId].State.

Simlarly, to access the location data from caller information, use CommonEventLocationData[CommonEventCall.CallerLocationId].State and CommonEventLocationData[CommonEventCall.CallerHomeLocationId].State.

Informer Transform Files Updated

The DotLiquid transform files, or templates, used to transform HxGN OnCall Dispatch queries into data formats used by providers have been updated for this release.

The transform files, located at *C:\Program Files\Intergraph\cfgparam\cfg_param_informer_transforms_files\Informer_files*, are typically modified for site specifications using a text editor and then uploaded to the

ConfigurationFile database table. The latest transform files must be modified and uploaded to the ConfigurationFile table to ensure proper functionality.

WAF Policy and OnCall.WebAPI

Interfaces that call the OnCall.WebApi endpoint directly to run commands must now be updated to avoid being blocked by the WAF policy. For example, the below URL should be updated as follows:

Before:

```
https://server.com:44343/oncall.webapi/api/Commands/2.0.0/CAD_GET_PARAMETER_VIEW_REQ
```

After:

```
https://server.com:44343/oncall.webapi/api/Commands/CommandWrapper/2.0.0/CAD_GET_PARAMETER_VIEW_REQ
```

The request's body should be wrapped inside of a CommandWrapper property, for example:

```
{
	"CommandWrapper": {
		"setName": "Calltaker",
		"listName": "General",
		"itemName": "ExternalCallerSuppInfoIcon",
		"offlineOptions": {
			"messageName": "CAD_GET_PARAMETER_VIEW_REQ",
			"messageVersion": "2.0.0",
			"allowOffline": true,
			"offlinePriority": 50,
			"timeToLive": 0,
			"retryCount": -1,
			"queueType": "",
			"isReplaceable": false,
			"shouldQueue": false,
			"failedAttempts": 0
		}
	}
}
```

Parameter Changes

See the *HxGN OnCall Dispatch Release Notes* for information on new and updated parameters for 2309.4.

Message Changes

Added Messages:

- GENROUTE 3.0.0
- CAD_WHO 3.1.0

Obsolete Messages:

- CAD_WHO 3.0.0 – Obsolete

Messages that have been marked as obsolete are still supported but are subject to being removed in the future.

2309

Overview of Breaking Changes

This document describes breaking changes in the 2309 release of HxGN OnCall Dispatch. If you plan to migrate an application or custom service to this version of HxGN OnCall Dispatch, these breaking changes could affect your site's current functionality.

Schema Changes

To view all database schema changes, extract all files in the *BreakingChanges.zip* file, and open the *10002303_to_10002309.htm* file in a browser window.

New ISM Services

Along with the OnCall website and Oncall Identity, which now run under ISM, the following services have been added for 2309:

- OnCall StringServerModule (uses .NET Core, which is runs in both Linux and Windows containers)
- CopyEnvironmentModule (uses port 9032)
- OnCall OcUtilServiceModule (uses port 9030)
- OnCall UnitEventModule (uses port 9012)

When using a load balancer, a port for OnCall Proxy does not need to be defined. If a load balancer is not being used, however, a port must be defined for OnCall Proxy.

Other Updates

- The upgrade of RabbitMQ will require an intermediate installation.
- SQL Server 2022 is now supported.
- HxGN OnCall Dispatch is now compatible with Microsoft Server 2022.
- The old string server module, StringServer, has been removed from ISM services.
- The old event/unit module, UnitEventModule, is now obsolete.

Parameter Changes

Parameter Lists

SetName	ListName	Version	Status
CADNotificationService	General	10002309	New

Mobile Server

Supplemental Information

The following supplemental tables have been refactored for HxGN OnCall Mobile:

- Person
- Vehicle
- Property
- Contact

The following updates were part of this refactoring effort:

- Simplify the configuration of supplemental information in the mobile app.
- Separate the supplemental component from the corresponding component used by HxGN OnCall Records.
- Remove obsolete expanders. Although expanders were removed, they can still be added through site configuration.
- Design the user interface to match the default OnCall Dispatch supplemental page.

The structure of the supplemental information configuration has changed:

- **Key name** – some key names have changed to match the key used by OnCall Dispatch. This change was made to add clarity to the key used by OnCall Dispatch and remove the key name that is shared between OnCall Dispatch and OnCall Records.
- **Customization Data** – the structure of the JSON node has changed as it relates to predefined and user-defined fields. Customization data is now handled differently and no longer requires using the `customData` and `customFields` nodes.

For each supplemental type, there is an example below of the new structure for 2303 and forward using only the `customData` node.

The order of the fields on the page is determined by the `positionId` parameter, regardless of whether it is a pre-defined or a user-defined field.

Using the supplemental vehicle as an example, a simple and high-level sample of the new JSON structure would be like this:

```
{
 "dispatchReport": {
  "supplementalInfo": {
   "supplementalVehicle": {
    "allPreDefinedFields": {
     "here": "in their own nodes"
    },
    "customData": {
     "allUserDefinedFields": {
      "here": "in their own nodes"
     }
    }
   }
  }
 }
}
```

With this new configuration, the supplemental table will match the pre-defined OnCall Dispatch supplemental configuration. All pre-defined fields will be configured under the

`supplemental*` parent node while all the user-defined fields will be configured under the `customData` sub-node. The user-defined fields include objects which use new columns in the supplemental information table.

To migrate existing supplemental customization, all the nodes under the parent `supplemental*` node must be moved under the parent node and then the `customFields` node must be removed. The `customData` node should be a direct child of the `supplemental*` node. All key names need to be reviewed and may need to be re-defined to match the OnCall Dispatch key names.

The following is an example of the new structure using Supplemental Vehicle.

- All predefined fields are defined under the parent node of `supplementalVehicle`.
- Any pre-defined fields defined under `customFields` is moved to the parent node `supplementalVehicle`.
- All user-defined fields are defined in the `customData` node.
- Regardless of whether the fields are predefined or user-defined, the order on the page is determined by the `positionId` parameter.

    }
  }
```

New Customization Data

Supplemental Person

Supplemental Person has been refactored the same as the other supplemental tables. Note that the RestAPI has the below fields hardcoded as `number` data types. This means that you cannot hide the default field and replace it with a field that accepts `character` data. However, you can hide the field if you are not using it or apply a mask to display the data in the format you wish. However, the data type must remain as a `number` data type.

- Height
- Weight

Technical Support and Information

Hexagon's Safety & Infrastructure division provides several ways to access information and to contact support, including self-help tools and phone support.

Self-Help Support Tools

Hexagon provides several electronic self-help support tools to answer your support questions 24/7.

1. Go to the *Support page* (*https://support.hexagonsafetyinfrastructure.com/infocenter/index?page=home*).
2. In the **Please Sign In** box, type your username and password and click **Login**.

   If you are not a registered user, click the **Not a Registered User?** link and complete the **New User Registration** form.
3. On the **Welcome to Support** page, click **Products**.
4. From the **Products** list, click the link to your product.
5. On the product page under **Product Releases**, click the product release you want to view.

   For information on open-source software in the product, click **Open-Source Software Notices** in the **Product Information** box (if the option is available).
6. On the product release page, click the document you want to read:
   - To read about new or enhanced features, click **Release Notes**.
   - To read about defects that have been fixed, click **Issues Resolved**.
   - To read about system requirements, click **Supported Environments**.

Release Notes and **Issues Resolved** might not be available for the initial release of a product because an initial release has all new features and no updated features. Some minor releases might not provide **Release Notes** or **Issues Resolved**.

Phone Numbers

For general Hexagon information, please call 800-345-4856 (US). For North American phone support, see the *Contact Support page* (*https://support.hexagonsafetyinfrastructure.com/infocenter/index?page=contact_support*). For worldwide support, please contact your *local Hexagon office* (*http://www.hexagonsafetyinfrastructure.com/global-locations*).
